PROJECTS

- Robust PDFLinks (2021)**
Python, PyPDF2, PDFIUM, GROBID, PDFMiner, Flask, Linked Data, HTML/JS/CSS
A web service to generate robust links for web resources. It allows to upload PDF documents, extract URLs from PDF annotations/text, invoke the Robust Links Service on URLs to preserve their content in web archives, and thereby generate robust links. Upon generating robust links, their availability can be announced to external systems via Linked Data Notifications. It also allows to view PDF documents side-by-side with robust links.
- StreamingHub (Ongoing)**
Node-RED, Python, LibLSL, WebSockets, Node, TF.js, Docker, Kubernetes, HTML/JS/CSS
A stream-oriented framework to create scientific workflows through visual programming and flow-based programming. It provides a web interface to create scientific workflows, connect to sensory data streams, pipe sensory data through workflows, and visualize analytics in real-time. A repository of preset workflows is also provided for common use cases. Additionally, it supports re-streaming of stored data into workflows, and generating synthetic data using stored data.

3. **MGaze** (Ongoing)
MediaPipe, TF.js, Node, Parcel, HTML/JS/CSS
 Collaborative project for webcam-based, multi-user eye tracking on the browser. It eliminates the need for additional eye-tracking equipment by performing facial detection, facial landmarks detection, iris detection, and gaze estimation through webcam feeds.
4. **ASDetection** (2019)
TensorFlow, Python, NumPy, Pandas, PyWavelets
 Using EEG and Thermography data to predict a diagnosis of ASD. First, features were extracted from pre-processed EEG and thermography data. Here, spatiotemporal features were extracted from EEG data using wavelet transformation. Next, machine learning models were trained on features to predict a diagnosis of ASD.
5. **HACS** (2019)
Python, Internet Archive, SciPy, NumPy, Pandas
 Estimating the rate of change of the academic web using archived copies of web pages. Here, archived copies are first obtained from the Internet Archive through its CDX Server API. Next, for each web page, archived copies are analyzed to detect when changes have occurred. These changes are then modeled as a poisson process and used to predict when a page is likely to change in the future.
6. **TheGPSERVICE** (2017)
React Native, AWS, Docker, Docker-Compose, Angular, Spring, PostgreSQL, OpenID, OAuth, BitBucket, HTML/JS/CSS
 Built a mobile application for making doctor consultations. Re-structured cloud infrastructure on AWS to reduce costs. Set up unified logging using AWS CloudWatch. Created Dockerfiles and BitBucket Pipelines to build, test, and push build artifacts into AWS. Provided development and production support for the web apps of The GP Service (UK) Ltd. Added single-sign-on capability to web portal. Upgraded web portal from Angular 2.x to 4.x.
7. **Containerized Deployment of Apache OODT** (2019)
Java, Maven, Docker, Docker-Compose, Avro, Solr, SLF4J, JIRA, Confluence
 Created Dockerfiles for each core component in Apache OODT. Added a Maven Archetype to auto-generate Dockerfiles and a Docker-Compose file when creating a new Apache OODT project. Issue tracking was handled using JIRA, and documentation was written using Confluence.
8. **MSstack** (2018)
Java, Netty, Kafka, Zookeeper, Curator, Git
 A full-stack, event-driven, microservices framework for Java, with business modeling. It abstracts away the complexities of microservices architecture by providing interfaces to write business logic. The framework internally handles microservice lifecycle, data partitioning, and auto-scaling. It also facilitates generating boilerplate code from Business Process Models.
9. **Semantic-KB** (2017)
ElasticSearch, TensorFlow, PostgreSQL, NLTK, Scrapy, Flask, Python, DialogFlow, HTML/JS/CSS
 Internship project at WSO2 Lanka (PVT) Ltd to automate question answering in WSO2 Support portal. Created a document index using ElasticSearch, a reinforcement learning model using TensorFlow to predict document-query relevance, and a search interface using HTML/JS/CSS.
10. **DengAI** (2017)
Python, Scikit-Learn, Pandas, WEKA
 A competition hosted by DrivenData, to model the spread of Dengue using weather and geographical information. Built a machine learning model that ranked #1 in 2017.
11. **TourMate** (2017)
ExpressJS, Node, MongoDB, React, Git, HTML/JS/CSS
 A web platform aimed at tourists and tour providers. Tourists can discover tour services and make reservations, while tour providers can post and advertise their services.
12. **Raven** (2016)
Microsoft Emotion API, C#
 A real-time customer satisfaction monitoring framework for the hospitality industry. It uses camera feeds to detect customer faces, analyze emotions, provide satisfaction ratings, and alert dissatisfactions in real-time.
13. **Onion** (2016)
C#, WPF, MySQL, Dapper ORM, VSTS
 A Point-of-Sales, Inventory, Reporting, Loan, & Payroll System for Dambulla Economic Centre, Sri Lanka
14. **MusicSchool** (2016)
PHP, Laravel, jQuery, MySQL, HTML/JS/CSS
 A web platform to manage information of a medium sized music school. It supports classroom management, progress tracking, attendance, and payroll.
